

I've been listening to the bands and different people talking about this petition to limit bandwidth, I think its fine for people to discuss there different opinions on this issue but to restrict us that do run audio gear would be a set back in ham radio.

I do however think 6k of bandwitdh on ssb is to much but that's just my opinion. Maybe 3.5k or 4k on ssb. and 7k on am.

I have listen to diferent people that do not run audio gear and exceed 6k because of excessive mic gain and there rf processors on in there radios.

I think it revolves around just a small number people that are upset with a the 6k guys witch I might add have moved from 178 to the bottom of the 20 meter band not to upset the people complaining.

I hope that things will work themselves out because if there was a restriction on bandwidth or from playing audio it will run hundreds of people that really enjoy audio experimentation off of ham radio and that would be terrible for the hobbie.

In a time where computers, deed restrictions and people just to lazy to apply themselves to get there ham radio ticket, we need all the people we can get to keep the hobbie alive and well.

Thank you for listening to my opinion and thank you for letting us voice are opinion to you.

Also thanks for the 60 meter band any added band (although may be restricted) is a good thing.
